

Release Notes

This document contains information about **V 4.2.17**, including bug fixes and new features in this release.

NEW FEATURES

- ALPO-2859 Alternative ProAlert e-mail recipient no longer possible**
The option to define an additional recipient of ProAlert e-mails under the personal e-mail settings in ALPO has been removed. ProAlert e-mails can still be activated for your own e-mail address. In addition, the e-mails are sent to an e-mail address defined by dbh in the ProAlert setup. Note: ProAlert is an additional function that requires a separate contract. Activating the checkbox in the e-mail settings without a corresponding contract has no effect. For more information, please send an e-mail to support@dbh.de.

BUXFIXES

- ALPO-3574 Customer reference for combined orders via interface is adopted for both order headers**
When importing a conventional BHT order as a combined order via the ALPO EDI interface, the specified sender reference of the creator of the order is now transferred to both order headers.
